

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at http://about.jstor.org/participate-jstor/individuals/early-journal-content.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PREVALENCE OF DISEASE.

No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.

UNITED STATES.

ANTHRAX.

Michigan—Detroit.

Senior Surg. Austin reported a fatal case of anthrax at Detroit, Mich. Death occurred August 12, 1916, after an illness of 48 hours. The deceased was employed at the works of the Detroit Curled Hair Co.

POLIOMYELITIS (INFANTILE PARALYSIS).

Georgia.

Floyd County.—Asst. Surg. Slaughter reported August 7: A suspicious case of infantile paralysis near Rome, Ga., in a child, R. B., female, white, 2½ years old, located in the country about 5½ miles from Rome.

Savannah.—Acting Asst. Surg. Cleborne reported August 10: A case of poliomyelitis was confirmed by the city health officer, August 9, in the person of a white child, 4 years of age. History of the case shows no known contact with any other case.

Idaho.

The State health officer of Idaho reported August 9: Case of infantile paralysis, with death, reported at Idaho Falls.

Kansas.

Collaborating Epidemiologist Crumbine reported August 8: A case of infantile paralysis at Bucklin, Kans., and one near Bogue, Kans., August 10: A case of infantile paralysis at Coffeyville, Kans.

Maryland.

Baltimore.—Surg. Vogel reported August 14: Five cases of poliomyelitis for week ended August 12; four deaths. He also reported one case, notified August 13, in a colored girl, 17 years of age, at 2013 Etting Street, and one death, August 13, at 916 Greenwillow Street.

Michigan.

Detroit.—Senior Surg. Austin reported August 8: A death from poliomyelitis at 1853 Cecil Street; case reported August 3; died August 6. August 11: Another case poliomyelitis, boy, aged 5 years, 547 Third Avenue. Total to date, 12 cases with 1 death; 2 have recovered, leaving 9 cases in the city August 11.

Minnesota.

Collaborating Epidemiologist Bracken reports that the following cases of poliomyelitis were reported to the State board of health of Minnesota from January 1 to August 12, 1916, inclusive:

POLIOMYELITIS (INFANTILE PARALYSIS)—Continued.

New Jersey—Continued.

Atlantic City.—The city health officer of Atlantic City reported, August 14, 1916, that seven cases of poliomyelitis had been notified in Atlantic City, one case on each of the following dates, July 12, July 25, July 30, August 1, August 8, August 10, and August 11.

New York.

In the Public Health Reports of July 28, 1916, page 2011, was published a list of cases of poliomyelitis reported in New York State, exclusive of New York City, during the period from June 13 to July 19, 1916. The following table is in continuation of that list and shows the cases reported up to and including August 2, 1916. A summary by counties covering the same cases represented in the following table was published in the Public Health Reports of August 11, 1916, page 2158.

Cases of poliomyelitis reported in New York State, exclusive of New York City, from July 20 to Aug. 2, inclusive.
